SUMMARY

Software Engineer with hands-on experience developing scalable web applications, backend services, and AI-powered solutions using Python, FastAPI, React, PostgreSQL, Docker, and AWS. Experienced in designing RESTful APIs, integrating enterprise platforms such as Salesforce, and building scalable software systems across backend and full-stack applications.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, Apex

Frameworks & Libraries: FastAPI, React, SQLAlchemy, PydanticAI

Web Technologies: REST APIs, HTML5, CSS3

Databases: PostgreSQL, MySQL, Neo4j

Cloud & DevOps: Docker, Docker Compose, AWS EC2, Amazon RDS, Nginx

Developer Tools: Git, GitHub, Swagger UI, VS Code, Pytest

PROFESSIONAL EXPERIENCE

Grid Dynamics

Python Full Stack Intern | Jan 2026 – Jul 2026

- Completed intensive training in Python, FastAPI, PostgreSQL, Docker, Git, and backend development fundamentals through structured learning and hands-on assignments.
- Applied software engineering practices including version control, REST API development, debugging, code reviews, and Agile collaboration while contributing to enterprise projects.
- Developed backend services and RESTful APIs while contributing to enterprise-grade web application development using FastAPI and PostgreSQL.
- Collaborated with mentors and team members to build, test, debug, and deploy backend features using Docker, AWS, and Git.

PROJECTS

Self-Evolving Salesforce Harness

- Developed backend features for an AI-powered sales intelligence platform integrating Salesforce CRM with FastAPI, React, PostgreSQL, and Neo4j.
- Developed backend APIs and executed chatbot memory and workflow orchestration to support intelligent user interactions.
- Engineered scalable backend components for enterprise CRM workflows using modern web technologies and containerized deployment.

Trello Backend API

- Built a Trello-inspired backend supporting authentication, boards, sections, tickets, invitations, and role-based access.
- Designed relational database models using SQLAlchemy ORM and implemented RESTful CRUD APIs.
- Containerized the application using Docker and deployed backend services on AWS EC2 with Amazon RDS.

Smart Log Analyzer

- Designed a log analysis application to process application logs and generate structured summaries.
- Implemented REST APIs for log parsing, error detection, and persistent analysis history.
- Enhanced log readability through categorized reports and JSON-based API responses.

Expense Tracker

- Built a console-based expense management application using object-oriented programming principles with budgeting and expense tracking features.

EDUCATION

Bachelor of Technology in Information Technology

Vasireddy Venkatadri Institute of Technology (VVIT) | 2022–2026 | CGPA: 8.01/10

CERTIFICATIONS

AWS Certified Cloud Practitioner • AI-Powered Applications • Python Bootcamp (Udemy) • NPTEL DBMS

LEADERSHIP & ACTIVITIES

Secretary, IUCEE Student Chapter - Organized technical workshops, coding competitions, and student engagement initiatives.

Volunteer, Make A Difference (MAD) - Contributed to educational programs and community outreach initiatives supporting underprivileged children.
